## Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 128 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 128 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) system (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (703) 305-1383. ### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

#### **IN THE CLAIMS:**

Claim 1, line 8, after the term "unit": delete the term "being"

The Examiner's Amendment was required to remedy an obvious typo in the claim language.

#### ***Allowable Subject Matter***

Claims 1-28 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art made of record teaches the general structure and practice of using a Fizeau interferometer for performing wavefront aberration, image state, distortion and curvature of field measurements at various points lying in a plane perpendicular to the optical axis of an image projection system under test. In particular, Suzuki teaches such an interferometer that uses its computing unit in a method of calculating simulated wavefronts and determining the required

Art Unit: 2882

correction profile for the test lens/objective based upon the measured wavefronts (see col.2, lines 22-35, and col.3, lines 4-52).

However, none of the references, alone or combined, disclose or reasonably teach the additional combination of a calculating unit that, or method steps describing, measuring an imaging optical system by calculating a transmission wavefront as measured by the interferometer and a wavefront aberration, imaging state, distortion, or curvature of field using the measured wavefront data taken at several measured imaging points as measurement points, and correcting a measured value related to a wavefront aberration, an imaging state, distortion, or curvature of field of the imaging optical system by using one of the measurement points as a standard, or reference, point as required by the combinations in claims 1, 13, 14 and 25-27.

Claims 2-12 and 15-24 are allowed by virtue of their dependency.

Furthermore, none of the references, alone or combined, disclose or reasonably teach the additional combination of a calculating unit that measures an imaging optical system by calculating a transmission wavefront as measured by the interferometer and a wavefront aberration, imaging state, distortion, or curvature of field using the measured wavefront data taken at several measured imaging points as measurement points, and correcting a measured value related to a wavefront aberration, an imaging state, distortion, or curvature of field of the imaging optical system by using another measurement point as required by the combination of claim 28.

Art Unit: 2882

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kakuchi (US 6,614,535) teaches a Fizeau type interferometric system with capabilities similar to Suzuki.
